introduction

This recording portfolio is built around the idea of memory through sound. We imagine a future moment of looking back on our lives as international students, where what returns first are not images, but sounds: birds in the morning air, the repeated rhythm of commuting, the noise of shared home life, and the quiet fade of night. Each recording acts as a fragment of experience, and together they form an audio portrait of a day, a place, and a period of life. Our goal is to create a portfolio that is both technically varied and emotionally resonant — not simply a collection of recordings for an assignment, but a small archive of lived memory and a reflection of our time abroad.

Portfolio Overview

PIECE No.	Subject	Recording Situation	Soundstage	Gear	Venue	Duration
1	A Remembered Commute	Home exit / public transport route	IRL Field Documentary Style	1 x Portable Field Recorder	burwood station/The University of Sydney/Train	2.5min
2	“Morning Birds” Memory of Campus	Campus outdoor field	VIRTUAL Composed Soundscape	1 x Field Recording Kit + Wind Protection	The University of Sydney	2min
3	Gaming Room Soundscape	Shared Apartment Room	IRL Live Room Documentary Style	1 x Portable Recorder + Lavalier Mic	Shared apartment room	3min
4	Late-night ASMR audiobooks	Studio	VIRTUAL Live Studio recording	1 x Condenser Mic / Portable Recorder	Studio	2.5min

PART 1

In Transit – A Remembered Commute

Introduction

This recording captures a remembered commute from home to university during study abroad life. It follows the changing sound environment of the journey, from the quietness of leaving home to the rhythm of stations, trains and campus arrival. The piece represents one of the most familiar sound fragments of student life abroad.

Technical & Space Requirements

- Portable field recorder for on-location recording
- Headphones for monitoring in public spaces
- Recording across home, station, train and campus
- Different microphone distances for detail and ambience
- Editing to maintain a continuous memory-like atmosphere

Subject	Recording situation	Soundstage	Venue	Duration
Leaving Quietness	Home exit / neighbourhood	IRL Field Recording	Home entrance / street	20s
Waiting in Public	Station platform	IRL Field Recording	Local station	30s
Mechanical Motion	Inside train carriage	IRL Field Recording	Train / carriage	50s
Entering Routine	Campus arrival	IRL Field Recording	Campus walkway	20s

Reason

These sounds were chosen because commuting is an ordinary yet memorable part of study abroad life. Although the journey may feel routine at the time, the sounds of footsteps, waiting, announcements and train movement often remain in memory long after the experience has passed. This recording turns a daily routine into a lasting sonic memory.

Artistic Vision

The artistic aim of this piece is to recreate the emotional rhythm of commuting as it might be remembered in the future. The recording should allow listeners to feel the transition from private space to public space, while reflecting the repetition, movement and atmosphere of everyday student life abroad. Rather than simple documentation, it is designed as a nostalgic fragment of lived experience.

PART 2

Morning Birds— Memory of Campus

Subject	Recording situation	Soundstage	Venue	Duration
Morning Birdsong	Campus green space / trees	IRL Field Recording	Campus garden / trees	35s
Wind Through Leaves	Tree-lined walkway	IRL Field Recording	Campus pathway	25s
Footsteps Toward Class	Campus arrival / walkway	IRL Field Recording	Campus path / entrance	30s
Distant Campus Presence	Early morning outdoor activity	IRL Field Recording	Courtyard / outside classroom	30s

Introduction

This piece captures the sound of a campus morning after the commute. From birds in the trees to wind, footsteps, and distant human activity, it reflects a quieter moment when movement gives way to atmosphere. It presents campus not only as a physical space, but as a remembered part of student life abroad.

Reason

These sounds were chosen because memories of place are often shaped by small and ordinary details. Birdsong, wind, and distant campus activity may seem subtle, but they often stay in memory over time. This recording turns a simple morning environment into a fragment of sonic memory.

Artistic Vision

The aim of this piece is to recreate the emotional atmosphere of a campus morning. Birdsong is used not only as natural ambience, but as a marker of calmness, memory, and place. The recording is designed as a nostalgic fragment of everyday life abroad.

Technical & Space Requirements

- 1 x portable field recorder
- Stereo microphone setup for outdoor ambience
- Wind protection for cleaner bird and environmental recording
- Monitoring headphones for checking background noise
- Quiet campus outdoor location with active bird presence
- Early morning recording time for clearer ambience and lighter foot traffic
- Editing focused on preserving space, distance, and natural atmosphere

PART 3

Gaming Room

Introduction

This project captures the authentic soundscape of my roommate during a real gaming session in our dorm room. The recording focuses on the natural rhythm, tension, and emotional dynamics created by keyboard actions, mouse clicks, voice chat, and room ambience. The aim is to transform an everyday activity into an immersive audio experience.

Technical & Space Requirements

- Equipment: Portable recorder (Zoom H5/H6), optional lavalier mic for voice, desktop stand or tripod.
- Space: A shared dorm room with manageable background noise. Windows and fans will be turned off to reduce interference. Microphone placement will be fixed to maintain consistency across takes.

Reason

We chose gaming sound as one of our portfolio elements because it naturally contains strong emotional variation, rhythmic patterns, and spontaneous vocal reactions. The dorm room provides a controlled environment that allows for clean recording and multiple takes. This type of soundscape also highlights how everyday sounds can become expressive artistic material.

Artistic Vision

The artistic intention is to reveal the invisible world of gaming through sound alone. Without visuals, listeners can still sense tension, strategy, excitement, and frustration purely through audio cues. The work aims to elevate ordinary gaming noises into a narrative soundscape that reflects personal emotion, spatial atmosphere, and the culture of online play.

Subject	Recording situation	Soundstage	Venue	Duration
Roommate Gameplay	Authentic gaming rhythm	IRL Field Recording	Shared dorm room	30s
Competitive FPS	High-tension tactical commands and rapid clicks	IRL Field Recording	Shared dorm room	20s
Solo Horror	Suspenseful silence and sudden jump-scare reactions	IRL Field Recording	Darkened dorm room	50s
Party Gaming	Multi-layered laughter and group social interaction	IRL Field Recording	Shared dorm room	20s

Planning

- Record during an actual gaming session at a time when the player is most engaged.
- Capture multiple sound layers: close-up keyboard and mouse actions, mid-range voice reactions, and ambient room noise.
- Conduct 2–3 recording sessions to collect variations in gameplay intensity.
- Edit and mix the material by separating layers, cleaning noise, and shaping dynamics to create a coherent soundscape.

PART 4

Late-night

ASMR

audiobooks

Introduction

This piece captures a late-night study reading scene. Through subtle ASMR sounds such as keyboard typing, page turning, writing, and drinking water, the recording recreates the calm and rhythmic atmosphere of studying alone at night. The soundscape gradually transitions into a soft reading segment, presenting the scene as an ASMR-style audiobook excerpt designed to promote relaxation, focus, and a gentle sense of companionship.

Technical & Space Requirements

- Portable recorder or condenser microphone for capturing subtle ASMR sounds
 - Headphones for monitoring recording clarity and background noise
 - Quiet indoor recording space such as a bedroom or study desk at night
 - Close microphone placement to capture detailed sounds like typing, page turning, and writing

Subject	Recording situation	Soundscape	Venue	Duration
Late Night Setup	Preparing study desk	VIRTUAL Live Studio recording	Studio	20s
Audiobook Reading	Soft spoken reading from text	VIRTUAL Live Studio recording	Studio	50s
Short Break	Drinking water / cup placement	VIRTUAL Live Studio recording	Studio	30s
Focused Studying	Typing, writing and page turning	VIRTUAL Live Studio recording	Studio	50s

Reason

These sounds together recreate the familiar and ordinary atmosphere of a late night during study abroad life. The quiet, focused, and relaxed study environment can provide listeners with a sense of companionship, as if returning to moments of concentrated study at university. Through these subtle and everyday sounds, the piece evokes familiar memories while creating a comforting and soothing listening experience.

Artistic Vision

The artistic vision of this piece is to transform an ordinary late-night study moment into a calming ASMR audiobook experience. By combining subtle study-related sounds with gentle reading, the work creates an intimate and immersive sound environment. The piece focuses on the quiet rhythm of studying alone, aiming to evoke relaxation, concentration, and a sense of quiet companionship through sound.

Production
Timeline

Dates	Tasks	Contributor(s)
Week 1 (3.25–3.31)	Confirm project concept, assign roles, and decide the four recordings.	All group members
Week 2 (4.8–4.14)	Finalize proposal content and submit the proposal assignment.	All group members
Week 3 (4.15–4.21)	Begin recording field and home-based sounds for the four pieces.	All group members
Week 3 & 4 (4.15–4.24)	Review rough recordings and refine the portfolio structure.	All group members
Week 4 (4.22–4.28)	Continue recording and collect any additional sound materials needed.	All group members
Week 5 (4.29–5.5)	Begin editing and post-production for the four recordings.	zixuan wang jiyuan Liu
Weeks 5 & 6 (4.29–5.12)	Review and integrate the recordings into a unified sound narrative.	yan Li yanmei Wang
Week 6 (5.6–5.12)	Refine edits and improve transitions between recordings.	All group members
Week 7 & 8 (5.13–5.27)	Finalize the portfolio and prepare the final submission.	All group members

Appendix

This proposal was developed by the group using a Canva presentation template as the visual design base. The template was modified to fit the concept, tone, and structure of the portfolio proposal.

AI tools were used only for limited language support, including brainstorming an outline and polishing written expression. All artistic concepts, planning decisions, recording ideas, and final proposal content were determined by the group.
